"Quick Change High Speed Boring Tools" launched

"Power Mill" launched

Productivity, Creativity & Infinity

Nine9 company began in 1994 and with the development of special tools, boring heads and accessories.

The Nine9 logo was commissioned in 1999.

It comes from the Chinese characters meaning "long life and durability" – words which aptly describe all Nine9 tools. 99 is the largest 2 digit number, indicating maximum product endurance.

Nine9 tools whilst being "special" in the industry, are standard in our product range. NC spot drills , super power drills , boring tools , engraving tools , i-Center , NC helix drills , chamfer mill.

Those established Nine9 as a market leader and innovator in the cutting tool field.

Product Milestone >>

NC Spot Drill | 60° ~ 145°

One tool will perform multiple applications

- NC Spot Drill with indexable carbide insert.
- High efficiency! Long tool life! Cost saving!
- Ideal for CNC lathes, CNC turning centers & machining centers.
- Increase cutting speed with coated carbide inserts.

Corner Rounding | RC0.5 ~ 10.0mm

Various corner radius inserts can fit on same holder

- Inserts are CNC ground for precision radius and location. Long tool life.
- Produces smooth and excellent surface finish on workpiece.
- Combination of corner rounding and 45° chamfering applications on same insert.
- Higher cutting speed and feed rate.

Indexable Center Drill « i-Center »

Pilot dia.
1~10mm

Long Tool Life! No need tool length resetting

- Excellent repeatability by insert type within 0.02mm in radial direction.
- Shorten set up and center drilling time.
- 0.05mm axial positional accuracy.
- Coolant can be supplied through the center of holder.

Micro Spotting / Engraving

30° / 45° / 60° / 90° / 120° / 142°

Different Angle! Burr-Free!

- Multi-side grinding, excellent performance.
- Higher cutting speed and DOC.
- No need to reset tool length.
- Widely used for marking on machine components, medical components, gun components, mold and die, automotive parts, gears, bearings, and luxury goods.

NC Deburring | 60° / 90°

Insert has 6 flutes, 6 times higher feed rate.

- Ideal for fine hole deburring.
- Smallest chamfer diameter $\varnothing 0.5\text{mm}$.
- Achieve high speed and feed rate on CNC machine.
- Retain exceptional positional accuracy of the deburring depth and diameter.

Deburring Mill | 60° / 90°

Front and back deburring, 60° also for threading.

- Each insert has 6 cutting flutes.
- Provide higher feed rate, optimized performance, and reduce cycle time.
- Minimum deburring bore from $\varnothing 3.8\text{mm}$ to $\varnothing 10\text{mm}$.
- Special insert geometry and clamping system provide high precision and accurate position.

Chamfer Mill | 45°

Front and Back Chamfering. Ultra high speed & feed rate

- Smallest chamfer insert in the world.
- Smallest counter sink diameter $\varnothing 7\text{mm}$.
- 4 times faster and up to 10 times higher feed rate than competitors.
- Dual relief angle insert, special edge honning and optimized coated.

Ergo System | ER11 / ER16 / ER20

Integrated ER taper-shank cutter

- Optimize the rigidity.
- Easy and simple assembly.
- Quick change, saving huge machine downtime.
- Excellent repeatability, saving set-up time.

The ergo system includes milling cutters, spot drills, engraving tools, deburring tools, chamfering tools, center drills and chamfer mill.

NC Helix Drill | $\varnothing 13\text{mm} \sim \varnothing 65\text{mm}$

Ideal for automation production. Excellent swarf removal

- Cuts materials by Helical interpolation.
- Just four tools can drill $\varnothing 13 \sim \varnothing 65\text{mm}$ holes.
- Serrated cutting edge minimizes cutting chips.
- Good for drilling on soft and long cutting chip material.
- Circular ramping milling, maximum ramping angle is 20° .

Super Power Drill | $5xD \sim 10xD$

5~10xD : $\varnothing 19 \sim \varnothing 40\text{mm}$ 12xD is also possible

- The unique design of insert pocket provides the best accuracy and rigidity of center insert.
- The center and peripheral inserts are positioned in order to divide the cutting chips into smaller spiral shape.
- Better surface finish. It can reduce your roughing operation.
- Lateral cutting forces can be absorbed by center insert due to a patented pocket design.

Super Drill | $3xD \& 4xD$

3xD : $\varnothing 10 \sim \varnothing 30\text{mm}$
4xD : $\varnothing 16 \sim \varnothing 30\text{mm}$

Smallest indexable drill from 10mm.

- Same insert for outer and inner insert.
- Better surface finish and better diameter accuracy.
- Possible to drill into angled surfaces without pre-drilling.

Power Mill | start from $\varnothing 10\text{mm}$

Indexable milling cutter 10mm. Higher wear resistance!

- Patented Dual Relief Angle Insert.
- Precision ground insert performs efficient repeatability and excellent accuracy.
- Special geometry design helps the strength of cutting edge in shoulder milling operation.
- Two types of shank - Screw fit type and Cylindrical type.

Boring Tool | Ø5mm~Ø50mm

Easy Adjustment! No backlash! G6.3 /10,000 r.p.m.

- Eccentric mechanism boring bars. • Adjusting range :±0.1mm
- ø5mm~ø50mm boring bars are interchangeable.
- Good for fine boring operation on milling machines, machining centers and special purpose machines.
- Replace solid carbide reamers.

Accessory

DC Slim Chuck Extension Bar

- Extension adapter • Steel & solid carbide type
- DC-E collet

ACE Spot Drill | 60° / 90° / 120°

Spotting Countersink Chamfering

Accuracy! Coolant! Efficiency!

- High rigidity, HPC high performance cutting, ultra-long tool life.
- 3 angles : 60° / 90° / 120°.
- 3 different sizes of insert.
- 2 flutes edged is symmetric, it reduces the lateral force while cutting in Ap.

Minimum Consumable Cutting

Nine9 insert only takes <5% carbide raw material compared to a whole solid carbide tool and still can achieve good performance.

- Can be used nearly 20 times
- Reduces the raw materials
- Reduces carbon emissions

NC Spot Drill >>

NC Spot Drill with indexable carbide insert.

High efficiency! Low cost!

CNC lathes, CNC turning centers and machining centers.

Features

- ▶ Spotting produces better hole position and geometrically uniform holes
- ▶ Available shank diameter- Ø5, Ø6, Ø8, Ø10, Ø12, Ø16, Ø20, Ø25mm, Ø3/8", Ø1/2", Ø5/8", Ø1/4", Ø3/4", M5, M6 and M8.
- ▶ One tool will perform multiple applications
 - Long tool life.
 - Each insert has 2 or 4 cutting edges.
 - Suitable for spotting, chamfering, grooving and engraving.
 - 60° / 82° / 90° / 100° / 120° / 142° / 145° angle for different applications.
 - Increase cutting speed with coated carbide inserts.

A New Drilling Concept!

0.5xD of spotting

Many drill manufacturers and suppliers state that their drills start drilling on the solid material. You can look forward to the following benefits when using the NC Spot Drill to drill a spot that is half of the drilling diameter.

► Drill Benefits >>

- **Higher feed rate.**
Why? Because the drill is guided at the strongest part of cutting edge.
- **Better center position.**
Why? Because the spotting is done by a single cutting edge which is out of center, and similar to boring operation.
- **Increased tool life.**

NC Spot Drill	Without Spotting	0.5xD Spotting	Larger Spotting
<ul style="list-style-type: none"> • Better center position! • Longer tool life! 	<ul style="list-style-type: none"> • Drill has less position accuracy and diameter tolerance. 	<ul style="list-style-type: none"> • Best result! • Higher speed and feed rate. • Better position accuracy and diameter tolerance. 	<ul style="list-style-type: none"> • Longer spotting time! • Guided at the weakest corner of drill. • Shorter tool life

▶ Inserts >>

- Mini spotting drill with indexable insert, low cutting power required.
- Especially good for Swiss type automatic lathes and CNC lathes.
- NC5071:**
 - For high alloy steel and cast iron.
 - Each insert has 2 cutting edges.
- NC2071:**
 - For carbon steel, low alloy steel, stainless steel, non-ferrous and titanium.
 - Geometry with supporting edges to stabilize the cutting condition on low power machine.
 - Each insert has 2 cutting edges.
- NC9076:**
 - For non-ferrous material such as aluminum, titanium, brass, copper and stainless steel.
 - Produces excellent surface finish on non-ferrous metal.
 - Each insert has 2 cutting edges.

Performance

► Combined spotting and chamfering 145° + 90° >>

- Reduces process to one operation. Shorten cycle time.
- Use to spot prior to drilling with high performance drills for higher accuracy of hole position.
- Good support spotting process for round parts.

► Comparison >>

WSP Spotting + Drill	Drill + Spotting	Step Drill
<ul style="list-style-type: none"> • Shorter drilling time • Guided at the strongest corner of drill • Longer tool life • Good position accuracy 	<ul style="list-style-type: none"> • Longer drilling time • Guided at the weakest corner of drill • Shorter tool life 	<ul style="list-style-type: none"> • Tool cost is high • Shorter tool life • Can't drill directly from solid on round parts. • Bad position accuracy.

► Example >>

- The recommended chamfering is 5% of the nominal diameter of the thread, for example 6.3 mm for M6 thread.
- If you need larger chamfer, it can be calculated the required depth of spotting.

Corner Rounding >> Type of RC

Various corner radius inserts can fit on same holder
Carbide insert can stand very long tool life
Produces smooth and excellent surface finish on workpiece.

Features

- Each insert has 2 cutting edges.
- Combination corner rounding and 45° chamfering application on same insert.
- Higher cutting speed and feed rate.
- Very small X offset, good for contour chamfering.
- Utilizes standard NC Spot Drill holders
99616-06, 99616-14, 99616-22 & 99616-32.

Applications

- a** Radius 0.5
- b** Radius 1.0
- c** Radius 2.0

N9MT05T1RC

RC

RC0.5 ~ RC1.0

All are interchangeable on same holder

1

Corner Rounding

► **Inserts >>**

- Various corner radius inserts can fit on same holder.
- Very small X offset 1.25mm for radius 0.5, the small x offset allows for profiling in small corners.

- NC2071:**
- Universal grade for all unhardened steel and cast iron.
 - Inserts are CNC ground for precision radius location.
 - Each insert has 2 cutting edges.

- NC9036:**
- For non-ferrous material such as aluminum, acrylic, titanium, brass, copper and stainless steel.
 - High positive geometry and sharp edge produces excellent surface finish.
 - Each insert has 2 cutting edges.

Corner Rounding >> Type of R

Various corner radius inserts can fit on same holder
Carbide insert can stand very long tool life
Produces smooth and excellent surface finish on workpiece.

Features

- Each insert has 4 cutting edges.
- R1.0 ~ R3.0 inserts are interchangeable on same holder.
- For front and back chamfering.
- Tool offset can be set after measuring tool length by tool presetter or Z-Zero Setter.
- Inserts are CNC ground for precision radius and location.
- Optimizes the tool performance and reduces the cutting time.

Front & Back

► Example >>

Action	
1	External and internal chamfering
2	Side chamfering
3	Side grooving
4	Back chamfering

Cutting Data

► Diameter / Depth Chart and Speed / Feed Rate Calculation of NC Spot Drill

► Instruction of Use >>

1. From Spot diameter "d" to get drill depth "t".
2. Point angle "α" is determined by which tool holder you use.
3. From "d" draw a horizontal line to get intersection of the line by point angle "α".
4. From the intersection draw a vertical line to the bottom to have depth of spotting "t". "t" is the drill depth of the NC program.
5. The sectional view of spotting will depend on the shape of insert, NC40 and other grades of inserts have different sectional view.
6. For chamfering, do not use tip of insert, 1mm(0.04") minimum clearance is required for a smooth surface finish.

► Calculate spindle speed and feed rate >>

1. Using your "d" value and cutting speed Vc from the data sheet, calculate spindle speed "S"(RPM).
2. "F" feed rate per minute $F = f \times S = \text{RPM} \times \text{IPR}$

Metric		Inch	
$S = \frac{Vc \times 1000}{\pi \times d}$	d = diameter -mm S = Spindle Speed -r.p.m. Vc = Cutting Speed -m/min.	$S = \frac{(3.82 \times SFM)}{d}$	d = diameter-inch S = Spindle Speed-r.p.m. SFM = Surface Speed-ft./min. Vc (m/min.) x 3.28
$F = S \times f$	f = mm/rev. F = mm/min.	$F = f \times S$	f = IPR = inch/rev. F = inch/min.

Cutting Data

Determine spindle speed and feed rate:

- Choose spotting depth to decide spotting diameter according to the Diameter/Depth chart on page 1-40.
- The spindle speed should be calculated by the maximum diameter of spotting, chamfering and grooving.

► LA Insert >> 45° Chamfering

45° Chamfering

Formula

$$S = \frac{Vc \times 1000}{d \times \pi} \quad \text{r.p.m.}$$

$$F = S \times f \quad \text{mm/min.}$$

α = point angle 90°

d = effective diameter

Vc = cutting speed-m/min.or ft/min.

S = Spindle speed

f = feed per rev.-mm/rev.

45° Chamfering	Work Material	Vc (m/min)	f (mm/rev.)	Grade of Insert
	P Carbon steel	150-320	0.05~0.10	NC40
	P Alloy steel	100-250	0.04~0.08	NC40

	H Hardened steel 40~56 HRC	60-80	0.05~0.10	NC60

Center Drill >> i-Center®

The “ i-Center ” is a trademark of Nine9, the developer of the first indexable center drill in the world.(Patented)
Offering an indexable insert system for the 1st time, Nine9’s “i-Center ” design improves your process performance.

Features

World's first indexable center drill
Shortens set up and center drilling time
Increases tool life and reduces tooling costs

▶ High Speed, High Feed Rate

- The special ground insert and rigid holder design facilitate high performance speed and feed rates. For example, drilling alloy steel at 6000 rpm and feed rate of 600 mm/min. (0.1 mm/rev.)

▶ Excellent Repeatability

- The positioning repeatability of the insert is within 0.02 mm (.0008”) in radial direction, thus ensuring conformity to any national standards.

▶ Easy Tool Length Setting

- The axial position accuracy of the insert is 0.05 mm (.002”). It is not necessary to reset the tool length when changing the insert or cutting edge.

▲ High pressure coolant can be supplied through center directly to tip of center drill insert.

▶ Extended Tool Life

- Coolant can be supplied through the center of the holder to increase performance and extend tool life.
- Insert geometry, grades and coating process are specifically engineered for centering applications.

NC2057 (IC10)

NC5074 (IC08)

NC2033

DIN 332 Form R

Ø1.0~Ø10

DIN 332 Form A + B

Ø1.0~Ø10

DIN 332 Form A

Ø2.0~Ø3.15

ANSI 60°

#2.0~#10

NEW NC2057:

- P35 grade, AL(L) coating, Universal grade for all kind of steel.
- Double-edged cutting, fully ground insert for improving machining stability. (IC10 inserts)

NC5074:

- P40 grade, Helica (AlCrN) coating, design for small diameter center drill (IC08 inserts).

NC2033:

- K20F grade, TiAlN coated, for carbon steel, alloy steel, high alloy steel and cast iron.

► Inserts:

- 2 cutting flutes design same as carbide center drill for high performance speed and feed rate.
- Each insert has 2 cutting edges.

- ▼ Excellent repeatability by insert type. No need tool length re-setting while changing insert or cutting edge.

Center Height Adjusting Sleeve

► Principle >>

- Designed for adjusting Center Height of center drills, NC spot drills, reamers and taps on the CNC lathes.
- The main body is made from two sleeves. The inner sleeve is to hold and lock the cutting tool.
- Its center is inclined to the outer sleeve. When the inner sleeve is pushed or pulled, the cutting tool's center height is adjusted to lower or higher position.

► Parts No.:00-99600-320H >>

► Type : SB32-IDER20

► Parts No.:00-99600-400H >>

► Type : SB40-ID16

► Applications >>

- Used when the CNC lathes need to adjust the center height.
- This sleeve can be clamped by VDI 40, VDI 50 E2 tool holders, and other types internal turning tool holders.
- Center height adjusting range: ± 0.15 mm (.006").
- Total axial movement is 6mm (.236").

Tightening screw 4mm Hex key

Performance

► Profit by making the right choice >>

- High speed and feed rate reduce cutting time.
- The unique design increases tool life and reduces change over time.

► Calculate spindle speed and feed rate

- Using your "d1" value and cutting speed Vc from the data sheet, calculate spindle speed "S"(r.p.m).
- "F" feed rate per minute $F = S \times f = \text{IPR} \times \text{r.p.m}$

Metric		Inch	
	d1 = diameter -mm		d1 = diameter-inch
	S = Spindle Speed -r.p.m.		S = Spindle Speed-r.p.m.
$S = \frac{Vc \times 1000}{\pi \times d1}$	Vc = Cutting Speed -m/min.	$S = \frac{(3.82 \times \text{SFM})}{d1}$	SFM = Surface Speed-ft./min. Vc (m/min.) x 3.28
F = S x f	f = mm/rev.	F = IPR x r.p.m	f = IPR = inch/rev.
	F = mm/min.		F = inch/min.

Micro Spotting / Engraving

This is a revolutionary new concept of engraving tools with indexable carbide insert. Provide HIGH QUALITY ENGRAVING in most kinds of material. Higher speed and feed rate, dramatically reducing your cycle time.

Features

► High Positive Rake Angle

- Indexable insert.
- Suitable for engraving all types of materials, such as plastic, non-ferrous metal, aluminum, copper, carbon steel and stainless steel.

► Multi-Side Grinding

- Full peripherally ground insert to ensure efficient repeatability.
- It performs excellently without producing any burrs, especially in copper, aluminum and stainless steel.

► High Speed, High Feed Rate

- Designed to run at high speed, up to 40,000 r.p.m.
- Feed rate 0.08mm (0.003") / rev. apply to aluminum; 0.05mm (0.002") / rev. apply to stainless steel.
- Reduces engraving cycle time!

► Economical

- Each indexable insert has 2 cutting edges.
- No need to reset after changing insert or cutting edge.
- Excellent repeatability!

Serial number

Logo outlines

Mold & Die

Product info

Dial scales

Spotting

► Applications

- Serial numbers, product codes, dial scales, signs, logo, graph and almost any character which can be created by the NC programming system.

- ▲ Widely be used for marking on machine components, medical components, gun components, mold and die, automotive parts, gears, bearings and luxury goods.

- Special forms are available on request.

90°
120°
142°

0.1mm

Micro Spotting 90°, 120° & 142°

NEW

Spotting + Drilling

Better position accuracy and diameter tolerance.

Without Spotting

Resulted off-center drilling, poor hole quality and reduced tool life.

► Inserts >>

- NC2032:** • For all kinds of steel from < 40 HRC, carbon steel, alloy steel, and cast iron.
- NC2035:** • ALDURA coating, reduces heat and tool wear.
• For steel with heat treatment up to 56 HRC.
- XP9001:** • Mirror polished, for non-ferrous metal, aluminum, brass, copper, plastic, acrylic.

Engraving Tool 60°

V060

► Inserts >>

- NC2071:**
 - Strong edge on chip-breaker, best suited for min. DOC 0.2mm.
 - Universal grade for all kinds of steel <30HRC, non-ferrous metal and stainless steel.
- NC2032:**
 - Long tool life.
 - For all kinds of steel from 30~50 HRC, carbon steel, alloy steel, and cast iron.
- NC2035:**
 - ALDURA coating, reduces heat and tool wear.
 - For steel with heat treatment up to 56 HRC.
- NC9031:**
 - Fully positive ground rake angle very sharp edge for shallow engraving.
 - For non-ferrous metals such as aluminum, brass, copper, titanium, plastic and acrylic.
- NC9036:**
 - DLC coating, very sharp edge produces excellent surface finish.
 - For non ferrous metals such as aluminum, brass, copper, titanium, plastic and acrylic.

► Attention >>

► Clamping the engraving insert

- Place and hold the insert in the insert pocket against the positioning side.
- See illustration below:

• Step-1

Place the insert in the insert pocket.

• Step-2

Push insert against insert pocket and insert the screw.

• Step-3

Tighten the insert screw.

Engraving Applications

► Tip >>

Use the V045 and V060 style engravers in materials that tend to push burrs such as stainless steels and high temp alloys. These inserts have a 0.2mm(0.008") radius with a very sharp cutting edge and cut very freely. Character widths start around 0.45mm(0.017").

This tool best replaces ball nose endmills. This tool is considered to be first choice for all but fine engraving width below 0.25mm.

Technical guide

► Before you start, please pay attention the following conditions

1

Engraving Tool

- 1 Recommended of tool holders**
High precision spring collet chucks, shrink fit chucks, hydraulic chuck.
- 2 Pre-balance the tool holder**
minimum **G6.3/10,000 r.p.m.** is necessary.
- 3 The downward feed rate of the Z-axis**
should be **reduced to 50%** of the table feed rate.
- 4 Tool shank runout:**
below 0.01 mm.
- 5 Torque screwdriver is recommended**
tighten Torque 0.9Nm.

Engraving Tool

► Engraving Depth and Width Reference Chart >>

- To use the engraving chart, select your engraving width (w) on the vertical axis. Select your engraving insert angle (45° or 60°), and follow the horizontal line from the (w) axis to the intersection with the insert angle.
- Follow the vertical line from this intersection point to the engraving depth (t) axis to determine the engraving depth.

NC Deburring 60° & 90°

Achieve high speed and high feed deburring and chamfering on CNC machine.

Retain exceptional positional accuracy of the deburring depth and diameter.

Features

- Ideal for fine hole deburring.
- Indexable type, high precision ground carbide insert.
- Using same tool holder of X060 engraving tool.
- Long tool life.

X060A..T6

6 flutes, 1 cutting edge

X060A..T3

3 flutes, 2 cutting edges
Economical

Deburring Mill 60° & 90°

For both front and back deburring and threading applications.

Features

► 60° deburring mill insert- also for threading application

- Thanks to special insert geometry and Nine9 clamping system it provides high precision and accurate position.
- The smallest insert Ø5.0 can do M6xP0.75 internal threading and deburring.
- For external threading, different pitch can be done by NC programming. For example: Ø10.0mm insert can do external threading pitch from P1.25 to P2.0mm, save your tool inventory.
- Each insert has 6 flutes.

► 90° deburring mill insert

- Front & back deburring in one operation.
- Minimum deburring bore from Ø3.8mm to Ø10mm.
- Each insert has 6 flutes.

60°

NEW

- ◀ 6 cutting flutes provide higher feed rate, optimized performance and reduced cycle time.

Chamfer Mill 45° >>

Nine9 chamfer mill

is designed for chamfering and countersinking with an indexable insert.

The insert is a specifically designed for use in high speed machining ; the multiple flutes provide for increased feed rate, optimizing performance and reducing cutting time.

Features

Ultra high speed and feed rate is the biggest advantage of Nine9 Chamfer Mills.

It is not a traditional chamfer tool, it runs 4 times faster in cutting speed and 10 times higher in feed rate. It is the most efficient tool you ever met.

► Excellent Repeatability >>

- Smallest Indexable counter sink, diameter $\varnothing 7$ mm.
- The insert is dual-relief angle, specially edge honning and optimized coated for high cutting speed.
- Optimized the number of teeth on the holder to achieve higher feed rate.

► Applications >>

- For front and back chamfering.
- 90° counter sink and 45° chamfering.
- For counter sink, circular chamfering, contour chamfering and face milling.

► Economical >>

- Each insert has 4 cutting edges.
- Long tool life.

Screw fit cutter

Face Milling

Chamfering

Back Chamfering

Countersink

Back Circular Chamfering

- High performance chamfer tool for upgrading your machining process.

1

Chamfer Mill

- ▲ For front and back chamfering.
Eliminates 2nd operation or deburring time.

Indexable Chamfer Mill

► Features >>

- Benefiting from the specially ground dual-relief insert and optimized coating, higher feed rates and cutting speeds can be achieved on chamfering operations.
- Each insert has 4 cutting edges, reducing insert cost.
- Fine edge honning cutting edge, good chip breaking condition and long tool life.

► Inserts >>

- NC2032:**
- AlTiN coating, very long tool life.
 - For carbon steel, alloy steel, cast iron and hardened steel up to 56HRC
 - Each insert has 4 cutting edges.
- NC9071:**
- TiN coating, very sharp cutting edge produces excellent surface finish
 - For non ferrous metal, aluminum, aluminum-alloy, brass, copper and stainless steel.
 - Each insert has 4 cutting edges.

Chamfer Mill

ER Indexable Cutter >>

ERGO just say “ergo”.

The Ergo is a new trademark of Nine9 for ER type indexable cutter.

Better rigidity, Quick change, Excellent repeatability, Tool length maintain.

Internal coolant, pre-balanced.

Concept

▶ An integrated ER taper-shank cutter, eliminate assembly tolerance.

▶ A clamping force gained from the 3 parts including Ergo nut, high strength Ergo pin and ER taper.

▶ Ergo nut drives the pin to push Ergo holder into ER taper. It is

“ A simple way to maximize clamping force ”

- Short tool length and quick change system for adapting on small working area.
- Ideal solution for BT30, driven tools, tapping and turning center.
- Increase tool life.

▶ Ergo provide customized tooling service.

- a** Ergo Holder (Integrated ER taper)
- b** Ergo Nut
- c** High Strength Ergo Pin

Quick Change

◀ Quick change, saving huge machine downtime.

- The simplest way to get tools on the machine.
- 3 fixed tool length groups of Ergo system.
- No need to reset tool length while changing tools in the same group.

Ergo

Ergo's Features

► Optimize the rigidity >>

- An integrated ER taper- shank cutter, eliminate assembly tolerance.
- Coolant can be supplied through the center of the holder.
- Pre-balanced, ready for high speed machining.
- Increase tool life.

Ergo Integrated design	Cutting tool + Spring collet
	
<ul style="list-style-type: none"> • Improve tool concentricity • Increase rigidity 	<ul style="list-style-type: none"> • When tightening ER nut, be cautious of uneven tightening situation. • Chips, rust, or collet deform.

► Excellent repeatability, saving set-up time >>

- Indexable insert provides the greatest benefit of saving tool changing time and tool length setting time.
- The drilling depth is constant after change the insert or cutting edge.

Ergo indexable cutter

Solid carbide center drill

► Dimension is not limited by the ER16 collet clamping range >>

- Ergo ER16 covers milling cutter range from 10 to 32mm.
- More efficiency and the possibilities to cut bigger parts.
- The shorter tool length, the better run-out accuracy.

Ergo indexable cutter

Solid carbide end mill

► Easy and simple assembly >>

- A simple Ergo cutter has minimal assemble parts, changing tool takes just few seconds.
- Thanks to ER taper, the repeatability of assemble tolerance is $\pm 0.1\text{mm}$ while changing same tool length of Ergo holder.

Ergo cutter	Solid carbide cutter
	
<ul style="list-style-type: none"> • Saving 50% your time 	<ul style="list-style-type: none"> • Must clean ER collet and check tool shank condition EVERY TIME!

▶ Setting process >>

• Step-1

- 1-1: Move the setter tip to touch the center-top of workpiece.
- 1-2: Press spring pin 1~2 mm down.
- 1-3: Tighten screw to fix spring pin, and get a temporary length of setter.
- 1-4: Input the temporary length value to the CNC controller.

• Step-2

- 2-1: The offline measures the datum offset of setter by height gauge.
- 2-2: Input datum offset to CNC controller.

• Step-3

- 3-1: Choose an Ergo tool to install, and input the offset value to CNC controller directly.

Assembly Steps

Make sure all parts are clean while re-assembly or change tool

Step-1	Step-2
Place Ergo holder into Ergo nut and align to screw hole.	Put Ergo pin into screw hole.
Step-3	Step-4
Lock Ergo pin screw.	Tighten into ER holder or driven tool spindle.

► As long as it complies with ER11, 16, 20 and ER25 standard, you can use Ergo system. >>

- Quick change and ultrashort over all tool length.
- Apply on any kinds of driven tools and collet chucks.

► Performance >>

NC Helix Drill

One Tool Performs Multiple Applications

Rough Milling,
Drilling & Slotting

All NC Helix Drill must be programmed by helical interpolation

Reduce Your Tool Inventory

Only four tools for making $\varnothing 13\sim\varnothing 65\text{mm}$ hole from solid.

Each holder can machine different diameters and hole depths, saving your tool inventory and cost!

No need to peck drill or dwell in operation even machine without internal coolant.

◀ **Cylindrical shank**
Apply external coolant

◀ **Patented Screw fit**
With center coolant hole

→ **Swarf Control:**
Small & Short

Extension Bar ▶
For 4xDc ~ 8xDc deep hole drilling

← Ti6Al4V, Titanium

3

NC Helix Drill

20° Ramping Angle
Either linear or circular ramping.

Two types of shank
Drilling depth up to 8xDc

20°

01

Feature

Lower spindle power consumption Easy to cut!

- Thanks to the small cutting load of the serrated cutting edge and helical interpolation lower power consumption. Work quicker, smarter and achieve better results.
- Circular ramping milling, maximum ramping angle is 20°. For example: tool HD27 machining Ø50 mm hole, 9 mm pitch for aluminum, 6 mm pitch for carbon steel.

02

Feature

Just four tools for drilling Ø13~Ø65 mm or larger

- Cuts by helical interpolation.
- Each holder can machine different diameters and hole depths.
- Enlarger hole is adaptable by using 99323 internal coolant cutter.

03

Feature

Special insert geometry - exceptional swarfs control.

- Serrated cutting edge makes the chips short and small, and easier to evacuate.
- Eliminate swarf and vibration problems while drilling difficult material or deeper holes.
- Excellent swarfs control for providing safe and rational chip removal for modern automation.

3

NC Helix Drill

“One tool” performs multiple applications

04
Feature

- Not only a drill, but an end mill too.
- Small radius path to cut a hole or step hole, various curved cavity shapes on different materials, reduce tool number and cutting time.

Functions in variable conditions It's so easy!

05
Feature

Strength

Opportunities

Extraordinary

ures

3
NC Helix Drill

Roughness Measuring Feature 06

- Making a flatness at bottom just by NC program, easy and smart!

Workpiece

Make "One more turn" after reached the depth.
Ex :
...
G03 I-1.5 Z-30 P5
G03 I-1.5 <make one more turn >
G01 X0 Y0 < afterward, let tool back to center of hole >

Flatness

Insert

NC5072 : P40, TiAlN coating.

General purpose, suitable for almost all kind of steel, stainless steel and Titanium. Recommended while clamping devices is unstable or deep hole drilling or apply on low power machines .

NC2032 : K20F, TiAlN coating.

Design for high performance cutting, special good for cast iron and hardened material <HRC50°.

** Nine9 TiN coated extension bar is also available please refer to page 7-159.

Technical Guide

※ Before you start, please pay attention the following conditions >>

<p>1</p> <p>Programming</p> <p>All NC Helix Drills must be programmed using helical interpolation</p> 	<p>2</p> <p>Recommend of Direction</p> <p>Tool path of moving downward by CCW (G03), Tool Rotation by CW direction is recommended.</p> 	<p>3</p> <p>Flatness on blind hole bottom</p> <p>Make <u>one more turn</u> after reaching depth.</p> <p>Ex. : G03 I-1.5 Z-30 P5 G03 I-1.5 <make one more turn > G01 X0 Y0 < afterward return tool back to center of hole ></p> 	<p>4</p> <p>Step Hole</p> <p>From solid is more safe and reduce the cutting time.</p> 	<p>5</p> <p>External coolant</p> <p>Lower pressure higher volume is recommended. Minimum 5 bar. Aim nozzle toward the tool body, let the coolant effectively enter the hole.</p> 
<p>6</p> <p>For Start</p> <p>Vc fz Pitch By Spindle Power</p> <p>Result adjusting</p> <p>Upgrade: P (adj. 1), Vc (adj. 2), fz (adj. 3) Improve: fz (adj. 1), P (adj. 2)</p>	<p>7</p> <p>Through hole</p> <p>To avoid insert breakage due to the force from circular interpolation, reduce Vc 50% at last cycle.</p> 	<p>8</p> <p>Through hole Add 1mm to the required depth (Z)</p> <p>To make sure there is no material left in the hole.</p> 	<p>9</p> <p>Enlarge Hole</p> <p>Choosing a 99323 drill body with internal coolant. Max. Ae=Dc- (Rex2) for enlarging hole.</p> 	<p>10</p> <p>Internal coolant</p> <p>High pressure is recommended. Minimum 10 bar. Recommended for 3xDc ~8xDc Use.</p> 

3

NC Helix Drill

※ Choosing a suitable drill body.

- Required hole diameter is within the recommended range (blue numbers).
- Required hole diameters (more than one size), choose the drill can cover more different hole diameters.
- For 3xDc~8xDc drilling, 99323 series is recommended.

Drilling diameter	Coolant type	Max. drilling depth	Tool type	Dc	Insert type	Re	Min. Ae	Max. Ae	Max. Ap
13-15-20	Internal	80 mm	00-99323-010-1320	11	N9MX04T002	0.2	1.58	10.6	3.5
	External	30 mm	00-99321-010-1320	11					
15-20-25	Internal	85 mm	00-99323-012-1525	13	N9MX05T103	0.3	1.92	12.4	4.3
	External	36 mm	00-99321-012-1525	13					
20-25-30	Internal	105 mm	00-99323-016-2030	17	N9MX070204	0.4	2.5	16.2	5.6
	External	50 mm	00-99321-016-2030	17					
25-30-40	Internal	130 mm	00-99323-020-2540	22	N9MX100306	0.6	3.3	20.8	7.5
	External	60 mm	00-99321-020-2540	22					
30-40-50	Internal	160 mm	00-99323-025-3050	27	N9MX12T308	0.8	4.17	25.4	9
	External	75 mm	00-99321-025-3050	27					
42-50-65	Internal	50 mm	00-99321-025-4265	33	N9MX12T308	0.8	4.17	31.4	9

Min. Ae = 1/3 insert length (L). Max. Ae = Dc- (Rex2)
Max. Ap < 3/4 of insert length

※ The NC Helix Drill is programmed using "Helical interpolation" on CNC machine, CNC controller must have 3-axis simultaneously motion function.

NC Helix Drill	Cutting Parameters (S & F)	Formula
	$S = \frac{Vc \times 1000}{Dc \times \pi} \text{ r.p.m.}$	Dc = Dia. of drill mm
	$F = S \times fz \times Z \text{ mm/min.}$	D = Dia. of hole mm
	$d = D - Dc \text{ mm}$	L = Depth of drilling mm
	$I = \frac{(D-Dc)}{2} \text{ mm}$	Vc = Cutting speed m/min.
	Cutting time (T)	S = Spindle speed r.p.m.
	$T = \frac{\pi \times d \times L \times 60}{F \times P} \text{ sec.}$	I = Circular radius mm
	Chip removal Volume rate (Q)	fz = Feed rate mm/tooth
	$Q = \frac{\pi \times D^2 \times L \times 60}{4 \times 1000 \times T} \text{ cm}^3 / \text{min.}$	F = Table feed rate mm/min.
		d = Circular diameter (D-Dc) mm
		P = Pitch of helical interpolation mm
	T = Cutting time sec.	
	Q = Chip removal volume rate cm ³ / min.	
	Z = Insert tooth	

Actual Feed Rate (f_{cut})

As different spindle power, you can reference this table, f_{cut}= fz x (PF), then you can get the actual feed rate.

Spindle Type	BT-30 Small power			BT-40 Medium power			BT-50 Big power		
Spindle Power (KW)	< 5	7	10	12	16	20	22	25	> 30
Power Factor (PF)	0.8	0.85	0.9	0.95	1	1.05	1.1	1.15	1.2

Ramping Angle

Circular ramping (α)	Linear ramping (α)
 $\alpha = \tan^{-1} \frac{P}{(D-Dc) \times \pi} \text{ degree}$ <p>P < 2.2 x Circular radius (I) α < 20°</p>	 $\alpha = \tan^{-1} \frac{ap}{Lm} \text{ degree}$ <p>Max. ap < 3/4 of insert length</p>

※ Length of tool path for linear ramping.

Length of tool path for Circular ramping= (D-Dc) x 3.14

3

NC Helix Drill

Application Example

► Special insert geometry is able to cut different materials >>

- Serrated cutting edge makes the chips short and small, and easier to evacuate.
- Recommended for almost all material types, good for drilling material that generates long, soft chips.

Example 1

SAE8620

SUS304

C1100

AL6061T6

TiAl6V4

Inconel 718

BT40, 22.5KW | Hole size: Ø25 x 50L mm | Tool: 00-99321-016-2030

Super Power Drill

5xD ~ 10xD
Ø19mm ~ Ø40mm

It is no doubt that deep hole drilling by indexable drill is always a challenge of the drill makers.

Nine9 "Super Power Drill", featuring by patented indexable center pilot insert design, which is the first time in the world, helping to achieve the cost-effective and good performance, making deep hole drilling up to 12xD possible.

With patented center pilot insert which aids accurate and steady deep hole drilling. Better finished surface, and possible reduce your boring process.

Deep Hole Drilling

up to 12xD

Indexable drills with
carbide center
pilot insert

- Better surface finish
- Better straightness
- Better roundness

Super Power Drill

Insert

► Center Pilot Insert >>

- Special geometry design delivers the benefits of the center drill in guiding position and eliminates the defects caused by the chip flow from the gap between the center drill and insert.
- High precision fully ground and edge honing to increase tool life and surface finish.
- Patented insert pocket to absorb the cutting forces, supporting the center pilot insert functional while drilling.

Patented pocket design

NC2032 : K20F grade, AlTiN coated, fully ground, honed cutting edge.
For carbon steel & alloy steel C<0.3% and stainless steel.

NC40 : P35 grade, TiN coated, fully ground, honed cutting edge.
For carbon steel & alloy steel C>0.3% and stainless steel.

► Periphery Insert >>

- Fully ground carbide insert
- Each insert has 4 cutting edges.
- Patented Dual-relief angle insert are designed for optimum chip breaking and good edge preparation for longer tool life.

NC2032: K20F grade, AlTiN coated, honed cutting edge for carbon steel, alloy steel, casting iron, stainless steel and hardened steel up to HRC 50.

NC40 : P35 grade, tougher insert with special chip breaker, TiN coated, for low carbon steel and stainless steel. Only available for insert N9GX06020431 and N9GX09030831.

Machining Power Requirement for Drilling

5xD~10xD

Material Classification for Calculation

There are an extremely wide range of materials and different machining operations in the metal cutting industry. We follow the ISO material group and color to make brief information for calculation of the required power for super power drill, the main effective parameter is “specified cutting force”, please use following table and formula.

Material Group	Material Type and description	Hardness HB	Strength N/mm ²	Specified cutting force kc N/mm ²	
P	1.10	Carbon steel C<0.3%, free cutting steels	~125	500-850	1900
	1.20	Carbon steel C>0.3%	~150	850-1000	2100
	1.30	Low alloy steel C<0.3%	180	Up to 750	2100
	1.40	Low alloy steel C>0.3%	200	750-1200	2600
	1.50	High alloy steel	200	800-1200	2600
	1.60	Tool steel, harder steels for toughening. Martensitic stainless steels.	<230	850-1100	2200
	1.70	Casting steel			2900
M	2.10	Free cutting Stainless steel Austenitic stainless steels	200	490-700	2300
	2.20	Difficult Stainless steel Austenitic stainless steels and duplex	175	650-850	2450
K	3.10	Grey casting Iron	180	250-350	1100
	3.20	Malleable casting iron..	230	Up to 600	1200
	3.30	Nodular casting iron	250	Up to 800	1800
N	4.10	Al- alloys(Si<12%)	60	230-310	500
	4.20	Al-alloys(Si>12%)	75	150-200	750
	4.30	Non-ferrous materials, Zirconium, Magnesium, Copper alloys, etc.	100	150-200	800
	4.40	Carbon and graphite composites, plastics, wood, rubbers, etc.	—	—	—
S	5.10	Nickel-based heat-resistant alloys	250		3500
	5.20	Cobalt-based heat resistant alloys	350		4150
	5.30	Iron-based heat resistant alloys	250		3050
H	6.10	Tool steels and hardened steels	55HRC		4500
	6.20	Hardened cast iron	—	—	—

Formulas for Calculation

feed force(KN) Ff

$$Ff = \frac{ap \times f \times Kc}{2000}$$

Drilling torque (Md)
torque=(Nm)

$$Md = \frac{f \times \pi \times D^2 \times Kc}{4000} \text{ Nm}$$

f = feed rate mm/rev.

Vc = cutting speed m/min.

D = drill diameter mm

Kc = specified cutting force N/mm²

Technical Guide

Internal coolant is required.

The coolant is feed directly into the inserts cutting face, cooling the top of the drill and preventing chip adhesion, which allows for quick and smooth chip evacuation.

Important Information

- **Recommend to make a spot hole first by spot drill. See page 4-121 for detail.**
- The cutting speed relates to the periphery inserts, The feed rate depends on the load of the center pilot insert.
- The best condition will create short cutting chips. The feed rate can be applied $\pm 25\%$ of the recommended value depended on the shape of the cutting chips.
- Be careful to monitor the spindle power consumption !
When the spindle load is 15% higher than starting power consumption, please change the periphery insert to next new cutting edge and change a new center pilot insert.
- Minimum coolant pressure is 10 bar (about 150 psi.).
- Increase 20% of the cutting speed and the feed rate for horizontal spindle machine.
- For the CNC lathes, maximum miss-alignment of drill center and spindle center is ± 0.05 mm, it is not necessary to drill center hole in advance.

Super Drill

3xD & 4xD

Ø10mm ~ Ø30mm

SMALLEST DIMENSION

3xD : Ø10 to Ø30 mm

4xD : Ø16 to Ø30 mm

SMALLER CUTTING CHIP

- The center and peripheral inserts are positioned in order to divide the cutting chips into smaller spiral shape. It helps the cutting chip to be removed faster and easier.
- Designed for high productivity, high speed cutting. Coolant supply is needed.

BETTER SURFACE FINISH AND BETTER DIAMETER ACCURACY

- Special insert positioning to balance the cutting forces, better surface finish and diameter accuracy are achievable.

4 cutting edges insert
AlTiN coated

Chip breaker of SD insert provides excellent chip control property due to its engineered design
Easy and simple change of cutting edge without inconvenience

≈ Flat bottom shape

Angled Surfaces

Possible to drill into angled surfaces without pre-drilling

4

Super Drill

- Smallest indexable drill from 10mm.
- 4 cutting edges per insert, same insert for outer and inner insert.

Holder 3xD 10mm~30mm

4

Super Drill

Insert

Features

- Fully ground dual-relief insert, for improved surface finish and higher feed rate.
- Primary relief angle is to increase the toughness of the insert, secondary relief angle is to strengthen the axial feed rate.
- Same insert for outer and inner insert.
- Square insert with 4 cutting edges, reducing cost per insert.
- Better surface finish.
- Better diameter accuracy.

NC2032

NC2032: K20F grade, AlTiN coated, for carbon steel, alloy steel, casting iron, stainless steel and hardened steel up to HRC 50.

Super Drill

Power Mill

Indexable milling cutter 10mm.
Patented dual relief angle insert!
Higher feed rate. Higher wearing resistance!

Features

A Series- Shoulder Face Mills

Dia. range: $\varnothing 10 \sim \varnothing 25\text{mm}$

C Series- Torus Radius Mills

Dia. range: $\varnothing 10 \sim \varnothing 26\text{mm}$

► Integrated ER taper-shank

Please see page 2-98.

A Series Shoulder Face Mills

- Strong insert with high positive geometry and helical cutting edges.
- Shoulder mill with good cutting performance and cutting edge strength, which produce perfect 90° shoulders.

Holder

► Cylindrical Shank >>

A Series Shoulder Face Mills

Insert

- NC5072 :**
 - High rigidity, special edge honing, resistance of impact during milling operation.
 - Special chip breaker design for high removal rate.
 - P40 tougher grade for smooth cutting, good for all kinds of steel.
- NC2032 :**
 - High rigidity, special edge honing, resistance of impact during milling operation.
 - For all kinds of steel from < 50 HRC, carbon steel, alloy steel, cast iron, aluminum and non-ferrous metal.
- NC2033 :**
 - Sharp cutting edge and high positive rake angle, good for finishing milling and surface roughness.
 - Re 0.5 and Re1.0 for your option.
 - Suitable for all kinds of steel.
- NC9031 :**
 - Sharp cutting edge and high positive rake angle, low friction coefficient for non-ferrous metal.
 - Good for Al, Al-alloy, Copper, Copper alloy and Non-Ferrous metal.

C Series Torus Radius Mills

Features:

- Submicron carbide inserts are fully ground.
- Special design milling cutter and ground insert for semi-finishing 3D surface milling for mold industry.

Insert

- NC30 :**
- Flat cutting edge design, universal type for all kind of materials.
- NC2032 :**
- High positive angle, special chip breaker design, higher wearing resistance.
 - Good for hardened material.

Dual Relief Angle Insert

Higher feed rate!
Higher wearing resistance!

EMB Boring Bars

Easy Adjustment / High Efficiency / Low Cost

EMB boring bars are “Eccentric Mechanism Boring bars” which can adjust to required diameter via an eccentrical mechanism. The boring bar is not at the center of the holder, but offset from the center.

Patent No:
108599(Taiwan),
ZL96201178.9(China)
I265836(Taiwan),
ZL200510101469.5(China),

Direct Adjusting Boring Bar

The Patented tool structure applies bit angle variation to produce slight size variation in diametric direction. Excellent for applications on single size boring tools, deep hole boring tools, special tools, etc. It features easy control of μ accuracy.

► Direct Adjusting Boring Bar Family

00-99043 screw fit boring head:
Adjustment range ± 0.1 ,
 $\varnothing 13.9\text{mm} \sim \varnothing 25.1\text{mm}$ boring head.

00-99801 extension bar:
Made by steel and solid carbide,
125mm maximum boring length.

00-99021 Direct adjusting boring bar
Adjustment range ± 0.1 ,
 $\varnothing 15.9\text{mm} \sim \varnothing 50.1\text{mm}$ boring head.

Boring Tool

99101 EMB Boring Bars 0.03 mm/div.

Diameter range:
6.5mm ~ 25.5mm

Each division 0.03mm shown on the tools, they are adjustable on the tool presetter or machine easily.

Total adjustment range ± 0.5 mm.

Adjusted to required diameter by eccentric mechanism, it is simple and backlash free.

Easy Handling

- Minimum readout division is 0.03 mm, it is easy for setting up fine boring.

Economic

- Low cost, high efficiency. It can replace end mill and brazed tool bits.
- The indexable insert allows a variety of materials to be cut.

Application

- Ideal as small hole boring tool with excellent accuracy.
- For fine boring operation on milling machines, machining centres and special purpose machines.

* H type with internal coolant can be ordered on request from Dia. 7mm. Ordering example: 00-99101-07H.

* Other sizes are available on request.

99121 EMB Boring Bars 0.01 mm/div.

Diameter range:
4.9mm ~ 25.1mm

Each division 0.01mm shown on the tools, they are adjustable on the tool presetter or machine easily.

Total adjustment range ± 0.1 mm.

Adjusted to required diameter by eccentric mechanism, it is simple and backlash free.

Easy Handling

- Minimum readout division is 0.01 mm, it is easy for setting up fine boring.

Economic

- Low cost, high efficiency. It can replace end mill and brazed tool bits.
- The indexable insert allows a variety of materials to be cut.

Application

- Ideal as small hole boring tool with excellent accuracy.

99146 Quick Change High Speed EMB Boring Bar

Diameter range:
4.87mm ~ 50.12mm

Each division 0.01mm
shown on the tools, they
are adjustable on the tool
presetter or machine easily.

Adjustment range:
+0.12 / -0.13mm.

Balance grade:
G6.3 10000 r.p.m

Adjusted to required diameter
by eccentric mechanism, it is
simple and backlash free.

Easy Handling

- Dimensions are easy to read. They are indicated on the tools and are easily adjusted on a tool presetter or in machining center.
- No backlash.

Interchangeable Boring Bars from Diameters of 5 mm to 50 mm

- This simple boring tool has minimal components. In minutes, the boring bar may be changed and the boring dimension set on the tool presetter.

Low Cost For Machining Small Holes

- Low cost micro adjustable boring heads.

High Speed

- Boring bar design ensures accurate high speed boring.
Grade balance is G6.3 10000 r.p.m., all sizes are guaranteed.
- Surface speeds of carbide inserts up to 700 m/min.
- Combination bore / chamfer / facing tools can be ordered on request.

Plastic box: 1pc

(Insert is not included, please order separately)
• Note: BT50 boring head shank is packed in a separate box.

6

Boring Tool

Application Example

Machining a cover of scooter engine:

Workpiece material:
Die casting, Al-alloy, ADC-12(A383)
Spindle Size: BT40

TOOL LIST by Nine9 Boring Bar 99146-series :

No.	Boring Bar	Grade of insert	Dia. mm	Depth	r.p.m.	F = mm/min.	Machining time
1	00-99146-08A	CCGT040102 NC30	Ø8H7	8 mm	8000	400	1.2 sec.
2	00-99146-32A	CCGT060202HP NC9031	Ø32H8	8 mm	2985	209	2.3 sec.
3	00-99146-35A		Ø35H7	12 mm	2730	191	3.8 sec.
4	00-99146-40A		Ø40H7	15 mm	2400	168	5.4 sec.
5	00-99146-47A		Ø47H7	15 mm	2030	142	6.4 sec.

Working Example

	Material	Vc m/min.	f mm/rev.	Roughness			Tool holder	Insert
				Ra	Rz	Rmax		
	Al alloy, 6061	150	0.2	0.076µm	0.50µm	0.6µm	99146-BT40-26A	CCGH0602U NC9036

99151 Deep hole boring 4~6XD

Diameter range:
4.87mm ~ 20.12mm

Each division 0.01mm shown
on the tools, they are adjustable
on the tool presetter or machine
easily.

Adjustment range:
+0.12 / -0.13mm.

Adjusted to required diameter
by eccentric mechanism, it is
simple and backlash free.

Easy Handling

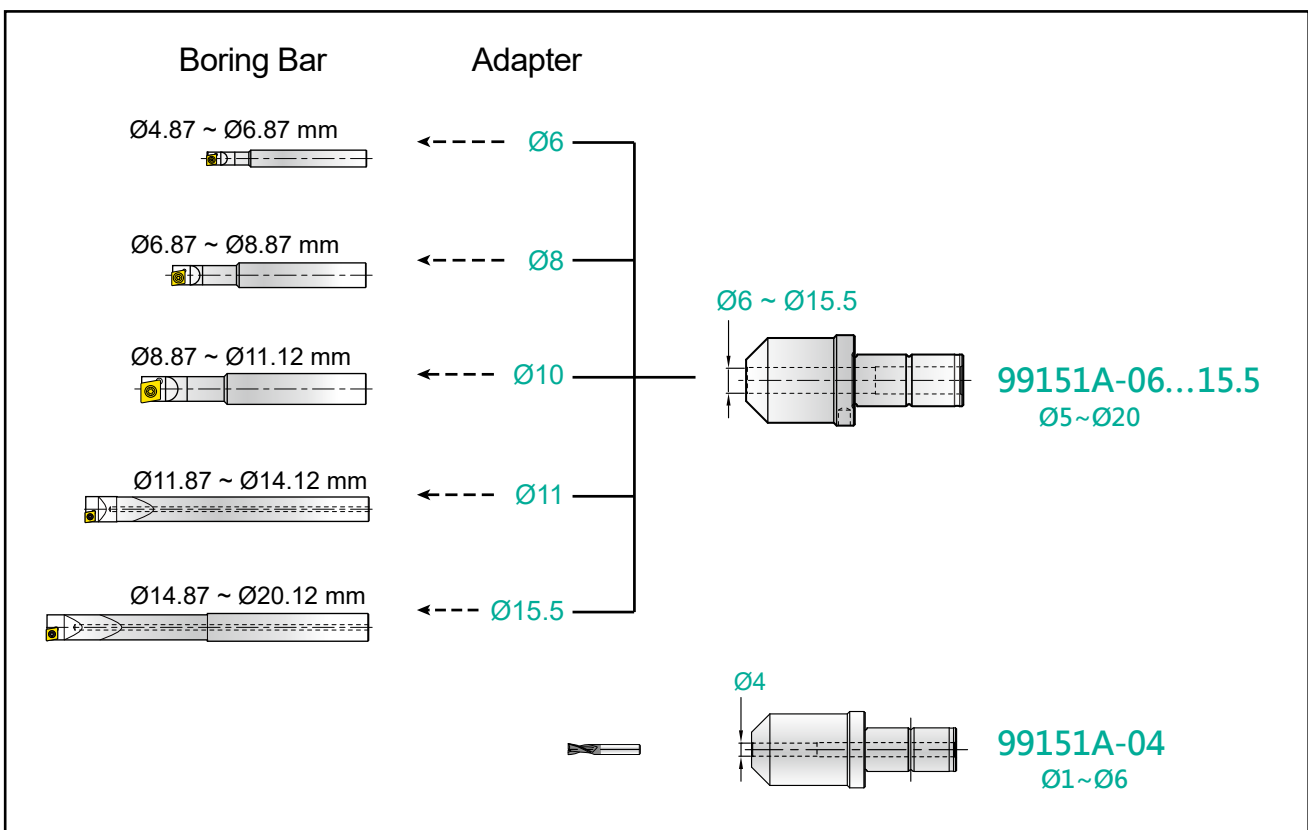

- 4~6xD boring depth, Good balance condition is maintained .

Economic

- Low cost, high efficiency. It can replace end mill and brazed tool bits.
- The indexable insert allows a variety of materials to be cut .

Application

- Replace end mill or reamer in small hole boring.
- Apply for electronic parts and micro machining parts.

99151 Deep hole boring 4~6XD

▶ Adapter >>

- Economical solution of small dia. boring bar.

*Torque screwdriver is recommended.

Procedures For Assembly

1. Use 4 mm allen-key to **loosen locking screw M8**, take care not to remove the screw.
2. Use 3 mm allen-key to **loosen pre-load screw M6**, take care not to remove the screw.
3. Remove the original boring bar and insert the new boring bar.
4. **Tighten the M6 pre-load screw**. Recommended torque = 0.9 ~ 1.0Nm.
5. Measure the boring diameter of the boring bar using tool presetter and adjust it to the required diameter.
6. **Tighten the M8 locking screw**. Recommended torque = 8 ~ 9Nm.

Procedures For Adjustment

On Tool Presetter

1. Loosen M8 locking screw.
2. Set the boring bar at the neutral position. (Step 1)
3. Measure the boring diameter using the tool presetter and compare with the required diameter. (Step 2)
4. If boring diameter is too big or too small, please put an allen-key into the adjusting driving hole. Turn to “ + ” to increase and turn to “ - ” to reduce boring diameter. (Step 3 and 4)
5. Tighten M8 locking screw.

To Increase Diameter

To Reduce Diameter

On Milling Machine and Machining Centers

1. Set the boring bar at the neutral position. (Step 1)
2. Tighten M8 locking screw.
3. Test cut on work piece, about 3-5mm depth on the machine.
4. Measuring boring diameter of workpiece and compare with required diameter.
5. If boring diameter is too big or too small, loosen M8 locking screw, please put an allen-key into the adjusting driving hole. Turn to “ + ” to increase and turn to “ - ” to reduce boring diameter. (Step 2 and 3)
6. Tighten M8 locking screw. (Step 4)

To Increase Diameter

To Reduce Diameter

Precisely Ground Inserts

- NC30** : • Universal grade for casting iron, carbon steel, alloy steel, stainless steel.
- NC2032** : • For high speed cutting of casting iron.
- NC2033** : • Good for carbon steel, alloy steel, stainless steel.
- NC9036** : • long tool life.
• Good for Al, Al-alloy, Copper and non-ferrous metal.
- U-XP9001** : • Super finishing insert with large corner radius for high feed rate.
• Good for Al, Al-alloy and non-ferrous metal.

Direct Adjusting Boring Bar

No Backlash!
Micrometric Adjustment!
Extra long!

The Patented tool structure applies bit angle variation to produce slight size variation in diametric direction.

Excellent for applications on single size boring tools, deep hole boring tools, special tools, etc. It features easy control of μ accuracy.

USA Patent

6

Boring Tool

Direct Adjusting Boring Bar

Diameter range:
13.9mm ~ 50.1mm

Adjustment range:
+0.1 / -0.1mm.

► Direct Adjusting Boring Bar Family >>

00-99021:

Boring bar with direct adjustment :
Adjustment range ± 0.1 ,
 $\varnothing 15.9\text{mm} \sim \varnothing 50.1\text{mm}$ boring head.

00-99043:

Screw fit boring head with direct adjustment
for anti-vibration extension bar :
Adjustment range ± 0.1 ,
 $\varnothing 13.9\text{mm} \sim \varnothing 25.1\text{mm}$ boring head.

► Features >>

- Patented adjustment mechanism, to push insert directly by wedge and screw after insert clamped.
- The boring diameter is adjusted by pushing the micrometric adjustment screw after the insert screw has been tightened.
- There is no backlash while adjusting boring diameter.

- ① Slide wedge
- ② Micrometric adjustment screw
- ③ Insert lock screw
- ④ Insert

Direct Adjusting Boring Bar

► Cylindrical Shank >>

- Patented adjustment mechanism, to push insert directly by wedge and screw after insert clamped.
- Good for machining centers and special purpose machine for micrometric adjustment.

► Ø16 ~ Ø50, Alloy Steel Shank >>

- Boring depth: L1, 4xD.
- Total adjustment range: 0.2mm.

Procedures For Adjustment

- Extension bar is TiN coated to show the maximum usable boring length.

On Tool Presetter

1. Turn **screw-2** clockwise to the **bottom end** before tighten the insert.
2. Tighten the insert by **screw 1**.
(If you have tool presetter, follow step 3-5; if you don't, jump to step 6-9.)
3. Put the boring bar on the spindle of the tool presetter.
4. Measure the diameter of the boring bar by tool presetter; it should be smaller than nominal diameter. Adjusting the diameter of the boring bar by turning **screw-2** counter-clockwise using the Allen-key to increase diameter until required diameter is achieved.
5. If the diameter has been adjusted too big, please loosen the **screw-2**, and then **screw-1**. Repeat step 2-4 until the required diameter is achieved.
6. Put the boring bar on the machine spindle and make a test cut, about 5 mm deep. Measure hole diameter of the test cut.
7. Moving the boring bar to the tool diameter setter. The insert of the boring bar should touch the ceramic probe gently. Setting the dial gage to "zero" and adjust diameter by turning screw-2 counter-clockwise using the Allen key.
8. Read and note the "Adjusting amount" on the dial gage.
 $\text{Adjusting amount} = (\text{Nominal diameter} - \text{test cut diameter}) / 2$ (mm or inch.)
9. Make test cut and measure again until required adjusting amount is achieved.

Adjusting Range 0.2 mm

Adjusting boring diameter on the presetter.

Direction to increase boring diameter.

ACE Spot Drill >>

Spotting
Countersink
Chamfering

Accuracy! Coolant! Efficiency!

High rigidity, HPC high performance cutting, ultra-long tool life.

Features

- ▶ 3 angles : 60° / 90° / 120°
- ▶ 3 different sizes of insert and holder, larger size is available on request.
- ▶ 2-flutes edged is symmetric, it reduces the lateral force.
 - High rigidity, HPC high performance cutting, ultra-long tool life.
 - Dual clamping screwed design ensures the vibration free during the cutting.
 - Each insert has 2 cutting edges
 - Holder with internal coolant.
 - Ultra long tool life.
 - Good for use on CNC lathe, Swiss type machine, small machine and weak clamping situation.

• It is symmetric.

• The double point angles ensure strength at the centre to prevent fracturing.

Spotting

Countersink

Contour Chamfering

Chamfering

► Can drill with minimum quantity lubrication (MQL).

Coolant

► **Internal Coolant**
 • Optimized coolant design for better balancing.

► **Dual clamping screwed design**
 • ensures the vibration free during the cutting.

► **Excellent repeatability.**
 No need tool length re-setting by insert type.
 Ultra long tool life.

ACE Spot Drill Spotting & Countersink

► Inserts >>

NC2057: • Universal grade for alloy steel and cast iron.
• Each insert has 2 cutting edges.

XP9000: • High positive geometry and sharp edge produces excellent surface finish.
• For non-ferrous material such as aluminum, titanium, brass, copper and long cutting chip metal.
• Each insert has 2 cutting edges.

ACE Spot Drill Chamfering

► Inserts >>

- NC2055:**
- ALDURA coating, reduces heat and tool wear.
 - For hardened steel up to 56 HRC.
 - Each insert has 2 cutting edges.

- XP9000:**
- High positive geometry and sharp edge produces excellent surface finish.
 - For non-ferrous material such as aluminum, titanium, brass, copper and long cutting chip metal.
 - Each insert has 2 cutting edges.
